ABOUT

Plax The Placement Portal is a one stop shop for preparing for the placement. Be it on-campus placement or off-campus opportunities, you can get information for both. Also you get exposed to various kinds of aptitude test subjects along with competitive coding question. The expert's ultimate advice for the placement preparation is cheery on the cake! The weekly blog articles are rich with interview-ethics which are much needed along with the knowledge.

Sorting Algorithms

index.png

Sorting is any process of arranging items systematically, and has two common, yet distinct meanings:

1. **ordering**: arranging items in a sequence ordered by some criterion;
2. **categorizing**: grouping items with similar properties.

Ordering items is the combination of categorizing them based on equivalent order, and ordering the categories themselves.

Rich text editor toolbar with icons for undo, redo, bold, italic, underline, link, unlink, list, ordered list, paragraph, text color, background color, and a 'Clear Class' button.

Competitive Coding

By Sahil Bhava | 2021-02-23

What is Kick Start?

Kick Start offers coders around the world the chance to develop and hone their programming skills through online-hosted competition rounds. The three-hour rounds feature a variety of algorithmic challenges, all developed by Google engineers so that you get a taste of the technical skills needed for a career at Google (the top competitors from our Kick Start rounds may be invited to interview at Google!). Our rounds are held regularly throughout the year at different times so they are easily accessible to coders everywhere. Each Kick Start Round is open to all participants, no pre-qualification needed, so you can try your hand at one or give them all a shot.

How it works

Register for Kick Start once on our website and you'll be set up to compete in any round you'd like! When each round is open, the three-hour countdown begins and you'll compete on our website solving algorithmic and mathematical problems. Following the round, you can check out your rankings and the round analysis. If you were a top competitor, you may be contacted by Google for a chance to interview.

Competitive Coding

Sorting Question

author

Competition occurs in nature, between living organisms which co-exist in the same environment. Animals compete over water supplies, food, mates, and other biological resources. Humans usually compete for food and mates, though when these needs are met deep rivalries often arise over the pursuit of wealth, power, prestige, and fame. Competition is a major tenet of market economies and business, often associated with business competition as companies are in competition with at least one other firm over the same group of customers. Competition inside a company is usually stimulated with the larger purpose of meeting and reaching higher quality of services or improved products that the company may produce or develop.
